TUTORIAL -7 BVA & Equivalence Partitioning

Aim: - Apply Boundary Value Analysis (BVA) and Equivalence Partitioning techniques for validation testing of forms and authentication modules.

Description :

Problem Statement :

Implementation Details:

Parameter	Details
Project Name	
Application/Software	
Module Name	
Version	
Programming Language	
IDE/Tool Used	
Database Used	
Operating System	
Browser (If Applicable)	
Test Environment	
Tester Name	
Test Date	

Source Code :

Equivalence Class Table :

Input Field	Input Range / Condition	Equivalence Class Type (Valid / Invalid)	Test Value	Expected Result

Boundary Value Analysis (BVA) Table

Input Field	Minimum Value	Just Above Minimum	Nominal Value	Just Below Maximum	Maximum Value	Just Above Maximum

Alternative BVA Format (Industry Standard)

Input Field	Boundary Condition	Boundary Value	Expected Result	Actual Result	Status
	Minimum - 1				
	Minimum				
	Minimum + 1				
	Maximum - 1				

Bug Identification Details :

Field	Details
Bug ID	
Defect Title	
Module Name	
Feature Affected	
Defect Description	
Defect Type	
Severity	
Priority	
Environment	
Reported By	
Date Reported	

Steps to Reproduce :

Step No.	Action Performed	Input/Test Data	Expected Result	Actual Result

Bug Report Template :

Field	Details
Bug ID	
Bug Summary	
Module Name	
Severity	
Priority	
Steps to Reproduce	
Expected Result	
Actual Result	
Assigned To	
Status (New/Open/In Progress/Fixed/Closed)	
Resolution	
Retest Status	
Remarks	

Bug Summary :

Bug ID	Module	Severity	Priority	Status

Observation :

Sr. No.	Observation	Remarks

Output :
